

Flame-style deep bowl

Not on display

Title/Description: Flame-style deep bowl

Object Type: Bowl

Materials: Earthenware

Measurements: h. 330 mm

Accession Number: 1081

Historic Period: Middle Jomon period (c. 3500-2500 BC)

Production Place: Asia, East Asia, Japan

Deep coil-built bowls date to the earliest Jōmon phases. During the Middle Jōmon phase a number of elaborate types developed in various parts of Japan, notably these flame-style pots, which have mostly been found in Niigata Prefecture in northwest Honshu (see Pearson, 1992: nos. 47-51). In some examples the 'flames' are pierced and as high as the body of the pot itself, but in this fine and well-preserved bowl the rim decoration is more restrained. It was formed by cutting and incising slabs of clay to form deep spirals and swirls.

Bowls of this kind are likely to have had a ritual use; the presence of carbonised deposits in some examples suggests that this may have included their functioning as cooking pots. Human bones have also been found interred in them, evidence of secondary burial practices.

Entry taken from *Robert and Lisa Sainsbury Collection* 3 volume catalogue, edited by Steven Hooper (Yale University Press, 1997).
